

Enterprise Risk Management Programs

The rise of international terrorism and the current state of globalization has challenged us to prepare and manage previously unthinkable situations that threaten your organization's future. Today's corporations must plan beyond the emergency response plan, EAP, or current crisis management programs. Organizations must now engage in the use of a more comprehensive security management tool: the Enterprise Risk Management Program. This plan must be a living document and an on-going process that clearly identifies your organization's core activities, before, during, and most importantly after a crisis event.

Crisis Management Planning

Even the best security management programs may not take into account the possibility of catastrophic emergencies. At GSI, we have developed crisis management programs and procedures to encompass the majority of emergency scenarios that a corporation may face whether operating domestically or on foreign soil. Our personnel will help plan through the quagmire of geopolitical issues, transport logistics, communications requirements and emergency medical planning. GSI maintains rapid deployment teams available for immediate travel should our client or his assets be endangered in the event of political instability, natural disasters, hostage situations or medical emergencies.

Planning Process:

This includes the step-by-step BUSINESS CONTINUITY plan preparation, identifying the firm's current readiness, prevention, response & recovery.

- Identify Critical Systems
- Alternate Communications
- Alternate Locations
- Finance & Operational Risk Analysis
- Employee Safety Strategies
- Public Relations Planning

Plan Maintenance:

This includes those tasks required to ensure your plan remains current and updated relating to your employees, key personnel, vendor relationships, ancillary coordination's and general readiness.

Labor Disruption Contingency Planning

Global Strategies, Inc. is prepared to make plans and contingencies for the security of our client's facilities, assets, and key personnel with minimal disruption to work productivity should the unfortunate event of labor disputes or strikes arise. Our personnel are able to walk you through the process of planning for a possible labor strike and give you guidance on what to expect from picketers, union organizations, and

the media. Should a labor dispute ensue, GSI is able to deploy personnel for the protection of your key executives and plant managers. We are also able to provide trained strike personnel and photographers to record illegal activities or property damage by laborers during a labor dispute. These records are often called upon in court to give an easement from strikers in the vicinity of the factory/corporate compound.

Media Policy Procedures

Sooner or later, almost all companies are faced with a Public Relations dilemma that must be addressed. Global Strategies, Inc. will make sure that the client's security concerns are being addressed when dealing with the media during a press release or in the event of a company crisis. We will work closely with your Public Relations Department to ensure the safety of speakers and the restraint of groups or individuals who may wish to tarnish your company's reputation for individual or politically motivated reasons.

Global Strategies, Inc. can help you emplace the appropriate structure to effectively deal with crisis situations that threaten the well-being of your business. We will help you identify roles and responsibilities of key personnel and use table-top exercises to help your management leaders better understand how critical decisions must be made by executive leaders in a time of crisis. At GSI we believe the Enterprise Risk Management is an ever changing and fluid plan. As such, we make members of our staff available to your firm through our programs ensuring you our expertise during planning, practice, and in the event of a crisis. We stand ready to help you develop an effective Enterprise Risk Management Program to enhance your critical infrastructure protection.
